

Objectives: Identify and graph ordered pairs.
Use a graph to find a solution to a linear function.

Plot each list of points. Tell whether they lie on a straight line.

1. $(1, 6), (3, 7), (5, 9)$

2. $(8, -2), (7, -3), (3, -7)$

3. $(-4, -1), (-6, 2), (-4, 4)$

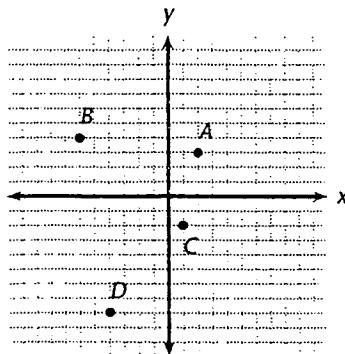

What are the coordinates of the given points?

4. A _____

5. B _____

6. C _____

7. D _____

Find the values for y by substituting the values 1, 2, 3, 4, and 5 for x . Make a table.

1. $y = x + 5$

x	1	2	3	4	5
y					

2. $y = x - 1$

x	1	2	3	4	5
y					

3. $y = 4x$

x	1	2	3	4	5
y					

4. $y = 3x + 2$

x	1	2	3	4	5
y
